

ComicLife Basic Instructions

Most everything in ComicLife can be done using drag & drop or the 'Details' tab.

1. Photos can be dragged from within the ComicLife browser from either iPhoto or the Finder into the comic page/panels.
2. Drag **ComicLife tools** onto your page:
 - a. Title – Make titles “pop” 
 - b. Your Name (small) without ‘frame’ and without ‘fill’
 >  >  >  > 

 - c. Panels – To hold the images and text features  following plot from left to right, and top to bottom.
 - d. Narration boxes – Narrators voice 
 - e. Talk and thought bubbles to add dialogue  and thoughts 
3. To **delete backgrounds** from images, you must use an application outside of ComicLife (like LiveQuartz). If you do, be sure to save your image file as a transparent .PNG image.
4. Keep all objects on page within the margins (display dotted red line when moving object outside of margin space).
5. File names will include the file extension **.comicdoc** when using ComicLife.
